

Collection of organic waste in the Bruxelles-Capitale region

LEGAL REQUIREMENT

From 1 May 2023: the sorting of food or kitchen waste from offices, restaurants, wholesalers, canteens, catering companies and retail outlets will be compulsory.

SOLUTIONS

MCA Recycling offers a collection service for the following types of organic waste:

- Kitchen waste, ready meals and leftovers
- Fruit and vegetables
- Meat, bones and fat
- Bread and confectionery
- Organic waste from food production

Only organic waste can be collected, no packaging or bags are accepted.

MCA Recycling offers you different solutions:

- 140 litre capacity wheelie bins, with optional pedal for opening the bin without having to touch the lid.

- bins with a smaller capacity for use as an *interim internal collection system*.

RECYCLING

The biowaste is converted into methane through the biomethanation process, and this is injected directly into the gas distribution network (ORES). The digestate (dry residue) is used as fertiliser.
